Herbal Consultation Management System

Herbal shopping is like having a virtual store for buying ayurvedic products on the internet. Imagine being able to explore and buy the products from the comfort of your home or anywhere using your computer or phone. Instead of going to a physical store, you can use websites or apps to see different types of ayurvedic products, check their features, and read what other people think about them. You can also compare prices and choose the best deals. When you find something you like, you can add it to your online "cart" just like you would in a real store. Then, you can choose to pay for it online or even when it arrives at your doorstep. Online shopping is all about convenience, choices, and getting what you want without the hassle of going to a store.

Modules: 1.ADMIN:

- o Admin can login into his own account using id and password.
- o Admin can add, delete, modify or update the website.
- o Admin can manage user and sellers.
- o Admin have the details of the user.
- o Admin can view the orders placed by user.

- 2.SELLER:
- o Seller can login into his own account using id and password.
 - o Seller is able to add their product for selling.
 - o Seller provide details about the product.
 - o Seller can view all the user who buy their products.

3.USER:

- o User can login into his own account using id and password.
- o User can add the product into the cart.

o User can see their previous order history.

4.DELIVERY AGENT:

They have the address of the User.

Functionality:

1. Product Listings:

- The online platform presents a comprehensive catalog of ayurvedic related products.

2. Search and Filtering Options:

- User can search for specific products using brands, features, and price ranges.
- Advanced filters help narrow down options based on preferences.

3. Shopping Cart:

- User can add selected items to their virtual shopping cart for future purchase.

4. Secure Payment:

- The platform offers secure payment gateways for online transactions.
- User can choose from various payment options, including credit/debit cards or cash on delivery.

5. Order Confirmation and Tracking:

- User receive order confirmation and tracking information through notifications.
- They can monitor the status and estimated delivery time of their orders.
